If you're considering purchasing an automation system, you really need to investigate Sharp Shape. Our Automated Orthotic Manufacturing System (AOMS) is used in far more labs than any other system. Sharp Shape scanner offers podiatrists the widest variety of lab options. Of course, popularity isn't everything—we also think we have the highest-quality and most cost-effective scanner and system on the market. By conservative estimate, tens of millions of orthotics have been produced from these systems during the past 20 years, under 'no-royalty' policy. Many labs have replaced several CNC machines already.

Heavily used CNC mill in AOMS system

Carved orthotic devices

Can you imagine how much AOMS was used? You must have some experience with the PC keyboard. When you use a keyboard a lot, the top of the keys will become shiny by rubbing and punching. What happens if you keep using it? The letter on the key will gradually faint away and the key become blank. What happens if you still keep using it? The plastic key will be worn through (with a hole on it). Ten years ago, we set up the AOMS system for a large lab. A couple of years ago, we revisited them on an upgrade, we was amazed by the look of the four arrow keys being used. They were blanks. The operator told us that they have replaced six keyboards, and every one of them had holes on the arrow keys. Imagine that! We don't charge royalties. The more you use the system, the more you benefit from it. Someone must have the impression that AOMS is used for large labs. That is a myth. By configuring the system with a low-cost router, you are able to reduce the cost on the system a lot. As result, AOMS is also suitable for some podiatrist/pedorthists groups and shoe stores if you have reasonable volume of production. In the past, a couple of AOMS systems were set up in garages. Please contact us if you are interested.
